## Photography - Psychophysical experimental methods for estimating image quality - Part 2: Triplet comparison method

---

| <b>Contents</b>   |                                      | <b>Page</b> |
|---|--------------------------------------|-------------|
| Foreword .....  |                                      | iv          |
| Introduction .....  |                                      | v           |
| 1   | Scope .....                          | 1           |
| 2   | Terms and definitions .....          | 1           |
| 3   | Two-step psychophysical method ..... | 2           |
| 4   | Experimental procedure .....         | 3           |
| 4.1   | Step 1 .....                         | 3           |
| 4.2   | Step 2 .....                         | 3           |
| Annex A (informative) Comparison between a paired comparison and a triplet comparison technique ..... |                                      | 4           |
| Annex B (informative) Number of sample combinations for triplet comparison .....                      |                                      | 6           |
| Annex C (informative) Standard portrait images .....  |                                      | 8           |
| Annex D (informative) Performance of the triplet comparison method .....                              |                                      | 12          |
| Annex E (informative) Scheffe's method .....  |                                      | 17          |
| Annex F (informative) Conversion of Scheffe's scale to JND .....                                      |                                      | 22          |
| Bibliography .....  |                                      | 25          |
