ISO/TR 230-8:2009-01 (E)

Test code for machine tools - Part 8: Determination of vibration levels

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Theoretical background to the dynamic behaviour of machine tools 13
4.1 Nature of vibration: basic concepts 13
4.2 Single-degree-of-freedom systems 16
4.3 Mathematical considerations 20
4.4 Graphical representations 22
4.5 Different types of harmonic excitation and response 26
4.6 More degrees of freedom 33
4.7 Other miscellaneous types of excitation and response of machine tools 40
4.8 Spectra, responses and bandwidth 43

5 Types of vibration and their causes 44
5.1 Vibrations occurring as a result of unbalance 44
5.2 Vibrations occurring through the operation of linear slides 48
5.3 Vibrations occurring externally to the machine 49
5.4 Vibrations initiated by the machining process: forced vibration and chatter 50
5.5 Other sources of excitation 52

6 Practical testing: general concepts 54
6.1 General 54
6.2 Measurement of vibration values 54
6.3 Instrumentation 55
6.4 Relative and absolute measurements 56
6.5 Units and parameters 56
6.6 Uncertainty of measurement 58
6.7 Note on environmental vibration evaluation 58
6.8 Type testing 59
6.9 Location of machine 59

7 Practical testing: specific applications 60
7.1 Unbalance 60
7.2 Machine slide acceleration along its axis (inertial cross-talk) 64
7.3 Vibrations occurring externally to the machine 67
7.4 Vibrations occurring through metal cutting 67

8 Practical testing: structural analysis through artificial excitation 68
8.1 General 68
8.2 Spectrum analysis and frequency response testing 69
8.3 Machine set-up conditions 70
8.4 Frequency analysis 71
8.5 Modal analysis 72
8.6 Cross-response tests 73
8.7 "Non-standard" vibration modes 74

8.8 Providing standard stability tests 75

Annex A (informative) Overview and structure of this part of ISO 230 76

Annex B (informative) Relationships between vibration parameters 77

Annex C (informative) Summary of basic vibration theory 79

Annex D (informative) Spindle and motor balancing protocol 83

Annex E (informative) Examples of test results and their presentation 84

Bibliography 93
