ISO/TR 230-11:2018-04 (E)

Test code for machine tools - Part 11: Measuring instruments suitable for machine tool geometry tests

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Preliminary remarks 5
4.1 Measuring units 5
4.2 Uncertainty of measuring instrument 5
4.2.1 General 5
4.2.2 Environment factors 7
4.2.3 Measuring equipment factors 9
4.2.4 Setup and procedure factors 11
4.2.5 Software and calculation factors 17
4.3 Measuring equipment calibration (ISO 10012) 17
4.3.1 General 17
4.3.2 Manufacturer and supplier of measuring instruments 18
4.3.3 User of measuring instruments 18
4.3.4 Measurement uncertainty 18
4.4 Comparison of measurement results by instruments using different measurement principles 18

5 Description of measuring instruments 19

6 Mechanical artefacts for general use 20
6.1 General 20
6.2 Reference straightedge 23
6.3 Test mandrels with taper shanks 27
6.4 Mandrels between centres 32
6.5 Reference squares 34
6.6 Reference cube 36
6.7 Surface plates 37
6.8 Reference sphere 38
6.9 1D ball array 39
6.10 2D ball array 42
6.11 Step gauge 43
6.12 Gauge block 44

7 Length and displacement measuring instruments 45
7.1 General 45
7.2 Instruments for large and medium range linear displacements 46
7.2.1 Laser interferometer 46
7.2.2 Reference linear scale 49
7.2.3 Standard scale 50
7.3 Instruments for short range linear displacements 51
7.3.1 Contact-type sensors 51
7.3.2 Non-contact sensors 55

7.3.3 Contact probing system 60

8 Straightness measuring devices 63
8.1 General 63
8.2 Taut wire with optical reading device 64
8.3 Laser interferometer with straightness optics 66
8.4 Alignment telescope 67
8.5 Two planes laser scanning device 70
8.6 Alignment laser 71

9 Squareness measuring devices 72
9.1 General 72
9.2 Laser interferometer with squareness and straightness optics 73
9.3 Index table with straightedge 74
9.4 Three planes laser scanning device 76

10 Flatness measuring devices 77
10.1 General 77
10.2 Sweep optical square 78
10.3 Laser interferometer with angular optics 80
10.4 Single plane laser scanning device 81

11 Angle measuring instruments 82
11.1 General 82
11.2 Level 83
11.2.1 Precision level 83
11.2.2 Electronic level 84
11.2.3 Inclinometer 85
11.3 Autocollimators 86
11.3.1 Autocollimator 86
11.3.2 Photo-electric autocollimators 87
11.3.3 Laser autocollimators 88
11.4 Laser interferometer with angular optics 89
11.5 Reference indexing table with optical angle reading device 90
11.6 Optical polygon with optical reading device 91
11.7 Laser assisted index device 92
11.8 Reference angle encoders 93

12 Special purpose instruments 94
12.1 General 94
12.2 Single dimensional position reading device 94
12.2.1 Telescoping ball bar 94
12.2.2 Long range telescoping ball bar 96
12.2.3 Fibre interferometer 97
12.3 Multi-dimensional position reading device 98
12.3.1 Two-dimensional digital scale 98
12.3.2 Laser tracing system 99
12.3.3 3D-probe for spheres (contact type) 100
12.3.4 3D-probe head, non-contact type 101
12.4 Other position reading device 103
12.4.1 Spindle error test equipment 103
12.4.2 Swivelling angle measuring device 104

13 Special application examples of the instruments 105
13.1 Spindle rotation accuracy measurement 105
13.2 Thermal displacement measurements 105
13.3 Tool position set 105
13.4 Workpiece positioning 105

Annex A (informative) Checking devices for instruments in the workshop 106

Annex B (informative) Existing ISO and national standards for measuring equipment (2015) 112

Annex C (informative) Special caution for supporting system of measuring devices 113

Annex D (informative) Reference table of uncertainty contributor 115
