DIN SPEC 91293:2013-05 (E)

Security Modelling Technique (SMT) for visualizing and analyzing security relevant information based on security levels

Contents

Page

Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Description of the Security Modelling Technique 6
4.1 General notes 6
4.2 Modelling of local factors 7
4.2.1 The "Area" component 7
4.2.2 The "Ship" component 7
4.2.3 The "Restricted Area" component 8
4.2.4 The "Other Area" component 9
4.3 Modelling of security levels 9
4.4 Modelling of measures 10
4.4.1 The "Measures" component 10
4.4.2 The "Resource" component 11
4.5 Modelling of processes 12
4.5.1 The "Start" and "End" components 12
4.5.2 The "Control Flow" component 12
4.5.3 Example of process modelling 13
4.6 Modelling of communication 13
4.6.1 The "Contact Point"component 13
4.6.2 The "Communication Flow" component 13
4.6.3 Example of communication modelling 14
4.7 Modelling of supplementary information 14
4.7.1 The "Note" component 14
4.7.2 The "Reference" component 15
4.7.3 The "Connection" component 15
4.7.4 The "Grouping" component 15

Annex A (informative) Example of an SMT model for the application domain "Passenger shipping" 17
