

DIN SPEC 91519:2025-08 (E)

Creation of a product carbon footprint (PCF) for power tools for forestry, landscape conservation, construction, industry and the trades; Text in English

Contents

	Page
Foreword	4
Introduction.....	6
1 Scope.....	7
2 Normative references	7
3 Terms and definitions.....	8
4 Product Carbon Footprint	10
4.1 General Definitions.....	10
4.1.1 Life Cycle Inventory	11
4.1.2 Allocation Rules	11
4.1.3 Allocation between co-products.....	12
4.1.4 Allocation for reuse and recycling operations.....	12
4.1.5 Exclusion from System Boundary	13
4.1.6 Cut-off Criteria.....	13
4.1.7 Data Quality.....	13
4.1.8 Units.....	14
4.1.9 Life Cycle Impact Assessment.....	14
4.2 Definition of the Scenario	14
4.2.1 Functional Units.....	17
4.2.2 Determination of Energy Consumption	19
4.2.3 Total Service Life (TSL).....	19
4.2.4 Tank to Tool	23
4.2.5 Maintenance.....	23
4.2.6 Repair.....	24
4.2.7 End-of-Life Treatment	25
4.2.8 Recycling	26
4.3 Reporting	27
4.3.1 Background report (for verifier only)	27
4.3.2 PCF Report.....	28
4.3.3 PCF Information B2C.....	29
4.3.4 Digital Provision	29
4.3.5 Critical Review	29
4.4 Workflow Diagram and Calculation Example	29
4.5 Creating New Product Specific Rules (PSRs)	29
Annex A (normative) Priority Parts and Tables for Calculating the ESL.....	30
A.1 Priority Parts (PP).....	30
A.2 Average service life extension (ASLE)	32
A.3 Ease of Repair (ER)	32
A.4 Part affordability (PA)	34
A.5 Repair Affordability (RA).....	35
Annex B (informativ) Recycling and Landfill Rates	36
Annex C (informative) Workflow Diagram and Calculation Example.....	37
Bibliography.....	41

Figures

Figure 1 — Categorization of emissions in the different life cycle stages.....	11
Figure 2 — Cradle-to-Grave scenario for the PCR of power tools in two different representations: Life cycle flow chart (top) and life-cycle-stage assignment to categories (bottom)	15
Figure 3 — Example for determination of the maximum power application of battery products for a chain saw and nailer	20
Figure 4 — Determination of the RSL for power tools.....	21
Figure 5 — Calculation rule for calculating the TSL when an ESL bonus is granted (PF = 1)	21
Figure 6 — Definition of the end-of-life phase for the PCR of power tools.....	26
Figure 7 — System Boundary of the product system (emissions related to the material lifecycle)	27
Figure A.1 — Visual representation of disassembly sequence and number of steps.....	33
Figure A.2 — Example for Disassembly Depth	34

Tables

Table 1 — Functional unit for various Power Tools or functions of Power Tools.....	17
Table 2 — Testing materials	18
Table 3 — Additional requirements for the testing and for the consumables.....	19
Table 4 — Determining whether a product can be repaired or not (PF).....	22
Table A.1 — Product with internal Combustion Engine (ICE)	30
Table A.2 — Electrical product.....	30
Table A.3 — Examples for typical power transmission parts.....	31
Table A.4 — Average service life extension (ASLE)	32
Table A.5 — Ease of Repair (ER)	32
Table A.6 — Ease of Repair (ER), alternative.....	34
Table A.7 — Part Affordability (PA).....	34
Table A.8 — Repair Affordability (RA).....	35
Table B.1 — Recycling and Landfill Rates	36
Table C.1 — Workflow Diagram and Calculation Example.....	37
