NATIONAL REF.: 269823801
TITLE : Light and lighting - Computerized calculation tool for
determining the LENI according to the EN 15193
comprehensive method
TITLE AMPLIF.: The technical report will be help the calculation the
LENI using the comprehensive method calculation
provided by the EN 15193-1 and a specially written
software program. The goal of this tool is to help the
use of the LENI software. The software has a graphical
interface that allows, step-by-step, the guided input of
the data required. LENI is calculated for one room, one
floor and/on one building. The scope will be for
non-residential buildings as prescribed by the EN
15193-1.

ORGANIZATION : UNI REGISTRATION DATE: 2017-01-31
COUNTRY : Italy
PROJECT ID. : 01602531/0001 NEW PROJECT

NATIONAL REF.: 269823795

TITLE : Metallic closures in contact with foodsuffs -
Determination of Polyadipates (PAD) having molecular
weight lower than 1000 Da in vegetal oil (D2) food
simulant

TITLE AMPLIF.: This standard is related to a methodology that make use
of liquid chromatography mass spectrometry (LC-MS) in
order to determinate the specific migration of
polyadipates (PAD) with molecular weight lower than
1000 Da in vegetal oil D2 food simulant from metallic
closures. The LC-MS method is suitable for the
quantitative determination of PAD from the LoQ to 300
mg/kg food simulant, according to the explained test
conditions. For the determination, PAD analytical
standards from the producers or from the users are
required. In order to cover the potential difficulties
in finding the standards and the information concerning
their molecular weights (essential data for the
determination of the results), three other approaches
are proposed as alternatives. The first one is based on
the co-definition between the involved parts of a
percentage relate to molecular weights distribution
<1000 Da; the second one suggest the determination
of this value according to UNI CEN/TS 14577; the third
is based onto gaschromatography mass spectrometry
(GC-MS; however, for this method, no validation and
precision data are available).

TITLE : Translation Services -- Project Management
TITLE AMPLIF.: The present ÖNORM deals with the various steps to be observed while managing translation services and describes the professional requirements and competences with regard to project managers in charge of those services. The standard will give translation project managers a practical orientation and will contribute to a harmonised approach to translation management tasks. Furthermore, by describing the processes in connection with translation projects, it intends to provide customers with information about how to support a rational und smooth flow of the translation process through proper preparation of the content to be translated prior to awarding the translation contract

TITLE : Effectiveness of paper deacidification processes
TITLE AMPLIF.: Archives, libraries and similar institutions store written and printed documents which they are obliged to retain on a permanent basis for cultural reasons and, in some cases, in order to meet legal requirements. Often, the condition of these documents is endangered for a number of reasons. The problem of paper degradation due to acid has developed into a tremendous problem for archives and libraries. This document specifies test methods and minimum requirements for paper deacidification processes regarding their effectiveness and consistency. It is applicable for all large scale processes which offer deacidification of acid documents made of printed or hand-written paper.

TITLE : Gymnastic and playing field equipment - Electrically operated lifting devices - Safety requirements and testing
TITLE AMPLIF.: This standard applies to electromechanical lifting devices for halls built in halls and playing field devices. This standard specifies special safety requirements for electromotive lifting devices for gymnastics and gaming machines. These special safety requirements apply in addition to the safety requirements for lifting devices defined by CEN / TC 147 "Cranes". This standard does not apply to hand-operated lifting devices, such as hand cranked or counterbalanced lifting devices. NOTE For safety reasons, eg due to 4.3 of DIN 18032-1: 1989 and operating problems by students, hand-operated lifting devices are not recommended. It should be pointed out that also hand-operated devices of the Ninth Ordinance on the Equipment Safety Act (Machinery Ordinance), with which the Machinery Directive 2006/42 / EC has been transposed into national law. This standard does not cover any part of the scaffolding of the lifting or safety device, its suspension or its fastening points, any device for setting the device and / or the gymnastics device itself.

PROJECT ID. : 13202873/0001 NEW PROJECT

NATIONAL REF.: 13202873
TITLE : Closing devices (fasteners) and fork plates for ship's
equipment
TITLE AMPLIF.: Closing devices specifies are parts of small hatchways
(e. g. access hatchways, hatchways for emergency
escape) and flaps (e. g. ventilator flaps). They
essentially consist of eye bolts and bow- or toggle
nuts. They serve to procreation the contact pressure
between cover and coaming or frame, which is necessary
for thightness of hatchways of flaps.

NATIONAL REF.: 13115763
TITLE : Aerospace Series - Methods for inspection of metallic components, produced with additive powderbed fusion processes
TITLE AMPLIF.: This Standard gives Information about the testing of additive manufactured products with the powderbed process. Destructive and non-destructive testing procedures are evaluated for their suitability. For additive manufactured products made of metallic wires or rods see the relevant welding Standards (e. g. DIN 2959). This Standard applies to the aerospace industry, but may also be used for other areas

TITLE : Lifts, escalators and passenger conveyors - Part 2:
Risk assessment for lifts
TITLE AMPLIF.: This ÖNORM describes each one possible procedure for
the risk assessment for additional risks for lifts with
openings in their shafts, for the construction
operation and for landings with limited access (e.g.
landings to penthouse), and can be used for the
development of risk assessments for the complete lift,
necessary according to ASV 2015, Attachment I (Anlage
I) in conjunction with ÖNORM EN ISO 14798.

ORGANIZATION : DIN REGISTRATION DATE: 2017-01-16
COUNTRY : Germany
PROJECT ID. : 02227300/0001 NEW PROJECT

NATIONAL REF.: 02227300
TITLE : Overhead electrical lines exceeding 45 kV - Hybrid
AC/DC transmission and DC transmission
TITLE AMPLIF.: This prestandard applies for the planning and
installation of high-voltage overhead electrical lines
with hybrid AC/DC systems, i.e. one or more AC circuits
are in parallel with one or more DC circuits in close
vicinity. It also applies for the planning and
installation of DC high-voltage overhead electrical
lines. In this prestandard AC systems with a nominal
voltage exceeding 45 kV and DC systems with a rated
voltage exceeding 45 kV are regarded as high-voltage
overhead electrical lines. The configuration of the DC
system (e. g. monopoles, bipoles) must be taken into
account especially for the rating of the neutral
conductor.
