NATIONAL REF.: 03101077
TITLE : Firefighting and fire protection - Mobile backflow
preventer BA
TITLE AMPLIF.: This standard applies to mobile backflow preventer BA
for fire brigade use at a nominal pressure of 1,6 MPa
(16 bar) and defines its characteristics. The mobile
backflow preventer BA is connected to existing
standpipes or hydrants without integrated system
separators for water delivery from the pipe network. It
is intended to prevent water from flowing back into the
drinking water supply network by sucking back or
backpressure when the pressure in this network is lower
than in the installed water line.

TITLE : Standard Practice for Calculating Sample Size to Estimate, With a Specified Tolerable Error, the Average for Characteristic of a Lot or Process
TITLE AMPLIF.: This practice covers simple methods for calculating how many units to include in a random sample in order to estimate with a specified precision, a measure of quality for all the units of a lot of material, or produced by a process. This practice will clearly indicate the sample size required to estimate the average value of some property or the fraction of nonconforming items produced by a production process during the time interval covered by the random sample. If the process is not in a state of statistical control, the result will not have predictive value for immediate (future) production. The practice treats the common situation where the sampling units can be considered to exhibit a single (overall) source of variability; it does not treat multi-level sources of variability.
