NATIONAL REF.: 04200986  
TITLE : Wood preservation - Part 1: General  
TITLE AMPLIF.: This standard specifies the general prerequisites for the protection of wood and wood-based panels in service against deterioration and/or destruction by organisms and for curative treatments, if necessary. It also includes provisions for giving preference to specific constructional measures (including the use of wood products of a sufficient natural durability) compared to preventive measures using wood preservatives. With regard to stability and serviceability during the intended service life of timber structures the standard contains provision in connection with DIN 68800-2, DIN 68800-3 and DIN 68800-4 additional to DIN EN 1995-1-1. This standard specifies use classes on the basis of the existing hazards in different service conditions and defines the relevant protective measures.

This standard specifies a method of measuring mechanical vibration generated by railway vehicles on tracks and which is transmitted to the track system. It deals with measurements at the source, along the propagation path and at the receiver. These measurements can be carried out in conjunction with the planning, construction and operation of railway systems. Based on the measurement results, the following tasks can be considered: - assessment of existing situations according to regulations and measurements at the immission site, i.e. exposure of human beings, buildings and sensitive equipment, - proofing of existing emission or immission situations, - vibration immission prognosis for different situations in the system source - transmission - receiver, - determination of the effectiveness of vibration reducing measures at the source, in the transmission path or at the receiver. Further, this standard comprises the determination of vibration-relevant soil characteristics, such as pressure wave propagation speed, shear wave propagation speed, Rayleigh wave propagation speed, shear modulus, modulus of elasticity and damping. They are useful for calculation of vibration propagation, e. g. for a prognosis.

TITLE : Acoustics - Management and monitoring of construction  
site noise in urban areas  
TITLE AMPLIF.: The standard provides details on the identification of  
the main events of the urban construction site that  
generate noise, on preventive impact studies, on  
mitigation measures to be adopted, on the  
verifications, on compensative measures and information  
to citizens and on the most effective methods of  
monitoring .The standard applies to the urban  
environment, as this is the most common and significant  
situation of the construction site noise impact. The  
indications given in this standard may also be extended  
to non-urban land situations, but with building façade  
very close to the site activities.The standard does not  
address the effects of re-radiated noise (generated by  
vibration) for which please refer to UNI 9614.

NATIONAL REF.: 273159438  
TITLE : Determination of diffusive emissions by measurements -  
Quantification of diffusive emissions of fine dust from  
industrial plants including agricultural sources

TITLE AMPLIF.: This standard describes procedures for the  
determination and quantification of diffusively emitted  
particulate matter such as PM10 and PM2,5 from  
industrial plants including agricultural sources. It  
supplements and details the requirements of VDI 4285  
Part 1 which specifies the general principles for the  
determination of diffusive emissions. Procedures for  
identification of sources and different approaches for  
determination of the emission rate of relevant  
diffusive sources are presented. Diffuse sources in the  
sense of this standard include industrial plants  
emitting particulate matter from non-conducted sources,  
which may arise e.g. from the exhaust air of an  
industrial hall in production processes or from the  
handling and transport of dust emitting materials.  
Furthermore, diffusive dust emissions may arise from  
agricultural sources such as big livestock farming or  
agriculturally treated areas. This guideline allows the  
analysis of the chemical speciation of these particles.  
It may be applied also to bioaerosols when direct  
methods are used. This standard is addressed to  
everyone involved in the planning, performance or  
evaluation of measurements for the determination of  
diffusively emitted particulate matter such as PM10 and  
PM2,5 from industrial plants including agricultural  
sources. The contents of this standard can be used as a  
reference by clients and contractors alike, for  
example, for formulating requirements and performance  
specifications for such investigations.

NATIONAL REF.: 273159252  
TITLE : Guidelines for the engineering and design of fully automated systems with rope traction for passenger transport  
TITLE AMPLIF.: The document is addressed at defining the procedural principles to use for reference when dealing with the engineering and preliminary design of fully automated transport systems, with rope traction, for passengers; these installations are usually recognisable in literature as APM (Automated People Movers). Transport systems with fixed installations and equipped with a control room are dealt with, which do not necessarily require the presence of staff, neither on vehicles nor at the stations; they are characterised by carriers - which operate on isolated runways, having a variable grade and layout - whose main traction is assigned to one or more rope loops and whose speed can be erased at the stations. The aim of these guidelines is to try cover those peculiarities of services which are proper of transportation in urban contexts or in any highly anthropic area, therefore not for sport activities neither for recreational purposes, which are typical instead of transportation in mountains and at thematic or amusement parks. In urban contexts, some standard aspects and technical features occur which are not always characteristic for the engineering and design of traditional rope installations or cableways; these were initially conceived for other environments. Carrying of luggage, of baby carriages, the access for any genre of people - including those with ambulation difficulties - are involved.
