Challenges Facing the Logistics Industry

Logistics: the Market of the Future

With increasing globalization and the expansion of the European market, there are more challenges to be faced than ever before. The logistics market must secure its competitive status without disregarding its impact on human health and the environment.

Numerous Operators – Numerous Interfaces

More so than any other sector, the logistics industry is characterized by a huge number of market players and involves numerous interfaces and solutions throughout the supply chain.

Increasing Cost Pressure

High transport costs (such as fuel, tolls, protection of the environment and safety) along with intense competitive pressures require intelligent and efficient solutions.

Time Factors

The adherence to strict response and delivery times is one of the most substantial customer expectations.

Benefits of Using Standards

Removing Trade Barriers

Standards support the exchange of goods and services and help remove trade barriers along the entire logistics chain. As a common, universal “language” they promote **compatibility, transparency and cost efficiency**.

Promoting Innovation

A good idea in itself does not guarantee economic success – market demand and acceptance are crucial.

Assistance from standards allows ideas and innovations to succeed more quickly. They facilitate swift entry to the market – their development promotes exchange between other market operators – and they ensure that individual solutions are quickly distributed and promptly become industry standards. This applies equally to products, services and procedures.

EXAMPLES OF OUR STANDARDS:

DIN EN 16258 – Methodology for calculation and declaration of energy consumption and GHG emissions of transport services (freight and passengers)

DIN SPEC 1001 – Warehousing and transport logistics – standardized performance description and assessment in the tender phase

Your Service Provider for Standards

- DIN is your partner for national, European and international standardization.
- DIN is a leading global service provider for the development of standards. We will plan, organize and provide technical expertise for your project whilst always maintaining a neutral position.
- In addition to our knowledge and expertise, DIN provides all interested parties from both the private and public sector with a platform for interdisciplinary collaboration.
- With DIN Standards and DIN SPEC, DIN offers numerous measures to meet your individual requirements.
- DIN is part of a global network and can distribute solutions worldwide.
- Standards and specifications from DIN ensure confidence in the market thanks to a high level of brand acceptance.
- Anyone is able to initiate a standards project at DIN, regardless of whether you are a company, researcher, layperson or any other organization.
